## **Confidential Report for Your Organization**

#### How is childhood vaccination measured?

This measure reports the percentage of children, age 2, who receive primary care from a Wisconsin Collaborative for Healthcare Quality (WCHQ) member health system and have completed each of the following immunizations on or before their 2nd birthday: 4 Diphtheria Tetanus and Acellular Pertussis, 3 Polio, 1 Measles, Mumps and Rubella, 3 H influenza Type B, 3 Hepatitis B, 1 Chicken Pox, 4 Pneumococcal Conjugate.

#### Who had vaccinations up-to-date?

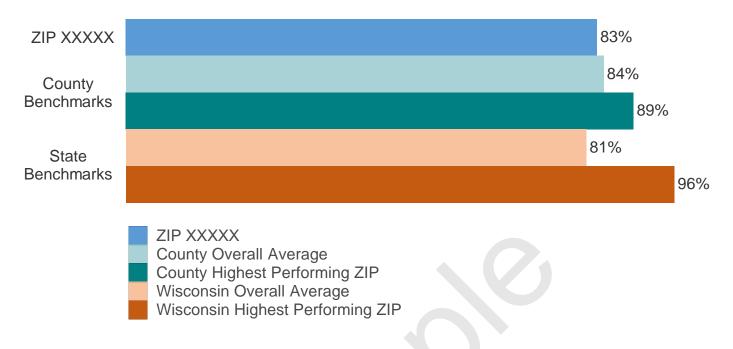

## Why does it matter?

On-time vaccination helps provide immunity before children are exposed to potentially lifethreatening diseases.<sup>2</sup>

## How does this ZIP compare to others?

## How has this measure changed over time?

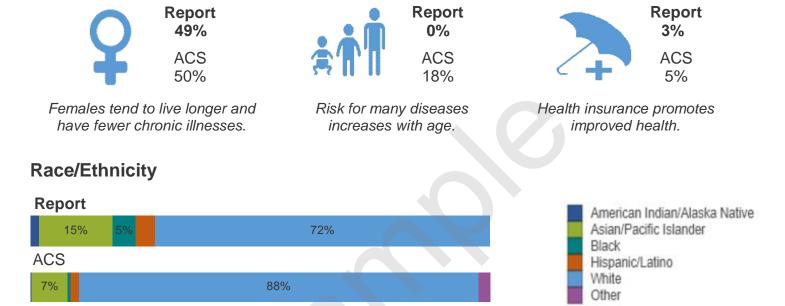

#### Who lives in this ZIP?

% Female

Learning about the people who live in a neighborhood can help you understand the health needs of the community. This section provides information about the people included in this report and how they compare to overall population estimates from the American Community Survey (ACS). The most recent ACS population of this ZIP is 25,000.

% Age 65 and Over

% Uninsured

People from racial and ethnic minority groups may experience physical, economic & work, service, and social environments that lead to poorer health outcomes.

## What else impacts health in this neighborhood?

The living conditions of a neighborhood shape health more than healthcare alone. To understand the causes of poor health in a ZIP, consider:

- 1. Have current or past policies reinforced systemic racism and/or income inequality in the neighborhood? Think across key sectors like business, education, and criminal justice.
- 2. Do all residents have a fair chance to make a livable wage?
- 3. Do all residents have access to safe, affordable housing?
- 4. Are all residents able to receive quality medical care? What barriers may be preventing this?
- 5. Do all residents have convenient access to nutritious food options?

#### Where do the health system data come from?

The primary data source is the Wisconsin Collaborative for Healthcare Quality. Health system data may include duplicate patient records if a patient receives care from more than one system. As of the date of this report, participating health systems include:
